## Drinking Water problems

village have insufficient access to purified drinking water due to impact of low income.

Technical Solutions, Community internal management, water contamination from agricultured chemical industries and water disposal. Here livestock waste and agricultural runoff are major contributions.

In this village ground water is polluted due to emissions released indiscriminately by a bio marine products company. water from 16 borewells was declared as unsafe for drinking by the pollution control Board (PCB) Rural water testing laboratory units located at Sittakulam and Vishakhapatnam

## INSTRUCTIONS

- ⇒ A water tax on heavy users could deter wasteful water consumption in industry and agriculture while keeping household water prices. These consumers would experience higher product prices due to the increased costs of production ideally. Such a tax would help decouple economic growth from water use. Rebates for the replacement of water-wasteful appliances like toilets and showerheads are a cost-effective alternative.
- ⇒ Industrial agriculture is an important contributor to water pollution. Many policies that incentivize organic farming and other sustainable farming practices serve to secure and protect water sources from agricultural pollutants.
- ⇒ Rainwater harvesting and recycled wastewater allow to overcome scarcity and ease pressures on groundwater and other natural processes to prevent. Groundwater and other natural recharge is a well-known process to prevent water scarcity that allows water to move from surface water to groundwater.

→ Education is very important to solve the water crisis. To cope with future requirements of water it is very important to radically reform all forms of consumption. It should be initiated by individual and its education should go beyond.

→ In villages implementation of direct borewells should be done by this people can recharge wherever possible to improve the availability of water for drinking.
