ACKNOWLEDGEMENTS

Firsl and foremost, papers of thanks to God, the Almighty for his blessings, to complete the project successfully.

I acknowledge the Honourable chief minister of Andhra Pradesh who always cares for the welfare of the students of his State and who allocates a major share of the budget for Education sector, and who thinks in a novel way for taking the initiative to implement the community service project, as an integral part of NEP 2020.

I sincerely thank Dr. Poloz Bhaskar, commissioner of collegiate education Andhra Pradesh for this vision in implementing the community service project (CSP) in accordance with the NEP - 2020, which gives the community student hands on experience, to deal with the problems that confront him in his day to day life.

I am extremely grateful to the authorities of Dr. Br. Ambedkar University, Srikrishna Srikakulam for their support.

I am indebted to Dr. P. Surekha, Principal of Government Degree College (men) Srikakulam for her relentless efforts in enlightening the students by conducting various workshops for effective implementation of this Herculean project.

I am grateful to Dr. S. Gazi Bushan, lecturer in English and co-ordinator of community service project for letting us know the importance of this project and inculcating in us the stream of social consciousness which is very essential in our endeavour.

My gratitude is due to the incharges of the Departments of Biotechnology, zoology and chemistry for their supervision and inspirational attitude towards the students.

I acknowledge the patience and endurance of our Mentor Mr. M. Pradeep in bringing out this project successfully.

I am greatly appreciate of all guidance and support provided by Dr. Ch. Shanthi Devi and Dr. R. Hooaritha throughout the entire project work.

I can't forget the kind cooperation and empathy of the seppanch of Barwia village, Srikakulam District in making me to stand before the society as a disciplined student, for which I am due to them.

CHAPTER 1: EXECUTIVE SUMMARY

The community service report shall have only a one-page executive summary. It shall include a brief description of the Community and summary of all the activities done by the student in CSP and five or more learning objectives and outcomes.

Main objective of the project :-

- Microbial analysis of water.
- capacity building of the public in terms of creating awareness among the public about the microbial and pH analysis of drinking water.
- creating awareness in the mode of their drinking water sources.

The strategy adopted is to:-

- To identify a potential rural village as the target area.
- To promote awareness in Microbial analysis of their drinking water.
- Identification and review of their drinking water sources.
- Survey on the accessibility of the water sources.
- Survey on the utilization of the mode of drinking water.
- Generation and analysis of Statistical data.
- Recommendations for maximum and effective mode of drinking water.

CHAPTER 2: OVERVIEW OF THE COMMUNITY

- About the Community/Village/Habitation including historical profile of the community/habitation, community diversity, traditions, ethics and values.
- Brief note on Socio-Economic conditions of the Community/Habitation.

CHAPTER 3: COMMUNITY SERVICE PART

Description of the Activities undertaken in the Community during the Community Service Project. This part could end by reflecting on what kind of values, life skills, and technical skills the student acquired.

Where we done community service project :-

- * We choosed Barwada Village to survey a part of community service project and we asked questions to the house holders.
- * We asked questions to households like:-
 - How they use water for drinking?
 - What are the sources of water for drinking?
 - Is there any diseases comes from this drinking water?

Intervention project :-

The only way to provide effective care to huge number of people in need in India is through community participation which can be achieved by creating awareness and disseminating information regarding the benefits available under various water resources to the citizens on how to know the purity.

And also this project served as a bridge in between the villages and us through community participation it will be the principle source of information on water resources of rural population of Andhra Pradesh.

This survey lies in the ability to categorize the water microbial analysis characteristics by many demographic and socio economic characteristics.

ACTIVITY LOG FOR THE FIRST WEEK

| DAY & DATE | BRIEF DESCRIPTION OF THE DAILY ACTIVITY | LEARNING OUTCOME | Person In-charge Signature |

CHAPTER 5: OUTCOMES DESCRIPTION

Details of the Socio-Economic Survey of the Village/Habitation. Attach the questionnaire prepared for the survey.

Socio-Economic Survey was conducted in Ponda Village of Sompete Mandal in Srikakulam district of Andhra Pradesh, India. We selected this area to have Socio-Economic Survey as it had many types of people with different walks. People of that village were friendly with us in finding of their details which include the no. of people, caste, their poultry, about Electrical Land, Transport, Income, their poultry, about Electrical Projects in their houses etc. We had a brief account of their lives by this information. Then we noticed that the scarcity of pure drinking water is caused to them. As their water had large content of TDS and pH which we tested was not supposed to drink. So, we suggest to drink boil water and also we took, on initiation to increase their water supply from the Government which we noticed as the best outcome of our project. The questionnaire that were asked to them as follows, name of the person and their family financial status, category, about their Village Sub-division, Government Health Scheme, their religion and also their permanent address. It's all about the Socio-Economic Survey is of that village is shown by Route Map.

Description of the Community awareness programme/s conducted w.r.t the problems and their outcomes.

Community awareness was created in the people by many ways. These we gathered some of villages in a day and prepared some placards to communicate with the villages in a way of rally. we prepared some slogans which create awareness in the people to educate them. on the next day we arranged some meeting along with to educate the illiterate people by research observations and also we provided some ways to do and overcome the purity of drinking water by boiling the water and also we provide calcium to remove hardness in the water. we collected some of the peoples opinion about this survey for the report to be submitted which can assure some relieve to the people. we came with the outcomes in the form of short term action plan and long term action plan which includes the plan for supply of water to every house by filtration and also to increase the water supply to the villages. usage of water saving acitvities & by promoting ecosoft machineries for managing their water quality and also 'Helio' a device which produce safe-drinking water from water resources. Most of the outcomes that we got from this project is that water is precious, mainly drinking water supply to all is difficult and mainly they asked us to provide better supply of water for a period of time in a day and a healthy water supply to them.

Short-term and long term action plan for possible solutions for the problems identified and that could be recommended to the concerned authorities for implementation.

Short term action plan: Providing of water sufficiently to every house in the village.

- purity can increased by reverse osmosis technology and also by replacement of water resources with new ones as like drilling of new wells and bores.
- using Boiled water rather than cold water.

Long term action plan:

- Water is one of the most precious resources on the planet.
- We use "Water Saving Aerators" in handwash and sinks.
- By promoting "Ecofit" machines for managing their water quality.
- By using water purifiers like reverse osmosis technology.
- Some rivers consist of huge algae, for this, we use "chemical free solution" to monitor and control, algae blooms in rivers.
- Using desalinator which is solar powered distillation systems for desalination of water.
- "Helio" is a device which produce safe water from non-drinkable water sources.
- Membrane filtration process "Reverse Osmosis" and "Electrodialysis" methods are used to reduce the content of salts in drinking water.

Describe the problems you have identified in the community

We selected Banura Village in the Socio-Economic Survey for collecting details according to our questionnaire. It is related to water mostly. The problem that we observed are mostly about scarcity of drinking water and purified drinking water. The villagers are unaware of pure drinking water. They had lack of modes of drinking water. Even they do not rise their voice to the government for better water supply.

The borewell water are enough to drinking but it is far away from houses. The people in Banura Village are went to that borewell for drinking water during summer. because in summer they didn't get the sufficient water to them. There is a lot of scarcity of water in this village. only few of them were able to buy water from mineral plants. so Many people were suffer to get drinking water. They were unable to had mineral water at low cost. Any other mineral plants are not located near to their village.

Water scarcity units access to safe water for drinking and for practising basic hygiene at home, in schools and health care facilities in the village.

Report of the mini-project work done in the related subject w.r.t the habitation/village.

A mini-project work in the related subject w.r.t the habitation/village. (For ex., a student of Botany may do a project on Organic Farming or Horticulture or usage of biofertilizers or biopesticides or effect of the inorganic pesticides, etc. A student of Zoology may do a project on Aquaculture practices or animal husbandry or poultry or health and hygiene or Blood group analysis or survey on the Hypertension or survey on the prevalence of diabetes, etc.

The Report shall be limited to 6 pages.

Water :-

Fresh water being one of the basic necessities for sustenance of life. The human race through the ages has striven to locate and develop it. Water is a vital source of life in its natural state is free from pollution but when man tampers the water body it loses its natural condition. Ground water has become an essential resource over the past few decades due to increase in its usage for drinking, irrigation and industrial uses etc. In the last few decades there has been a tremendous increase in the demand of fresh water, due to rapid growth of population and the accelerated pace of industrialization. Human health is threatened by most of the agricultural development activities particularly in relation to excessive applications of fertilizers and unsanitary conditions. Rapid urbanization especially in developing countries.

India has affected the availability and quality of ground water due to its over exploitation and improper waste disposal especially in the urban areas. According to WHO organization about 80% of all the diseases in human beings are water borne. Further ground water and the pollutants it may carry mode with the source of pollution and degradation. If ground water quality remain undetected for years once the ground water is contaminated its quality cannot be restored by arresting the pollutants from the source polluted water is contaminated its quality cannot be restored by arresting the pollutants from the source polluted water lead to various gastrointestinal problems, liver infections, tropical diseases and terminal diseases like cancer. Children are often the worst affected dying in large number because diarrhea. Hence the quality of water is equally important as that quantity.

Water can be tested by physical methods at home level by pH and TDS in which it can show the water purification to use it as drinking water. We collect some water sample from village name of Baruva of Gokakulam district.

Measurement of pH of water samples-

1. Get to know the pH by using litmus paper:-

Litmus papers are strips of paper that contain an acid or a base. The most common of these are red and blue. The red strips turn blue if the substance is alkaline and blue strips turn red if the substance is acid. Litmus papers can be used to provide a quick and easy test, but it can give a result.

2. Collect a sample of water in a clean vessel:-

The water sample must be deep enough to cover the test strip.

3. Dip a test strip into the sample:-

Just a few seconds of exposure will suffice. The different indicated bars on the paper will begin changing color within a few moments.

4. compare the test strip with the color chart that came with the paper:-

The color on the chart was matched to one of its colors of the test strip. The chart correlate color patterns to the pH levels.

The pH of the water sample which we collected from Barwala had 7.8 of the tapwater and borewell.

Measurement of TDS - using filter paper and a scale
of the water sample :-

Weigh the Evaporating dish:-

Measure the evaporating dish using a weighing machine and note the reading in mg. before we measure the weight of the evaporating ensure that the dish is completely empty dry and free from any of extraneous matter.

Stir the water sample:-

Stir the water sample vigorously. so that the matter present in the water can be dispersed equally throughout the water sample.

Collect the water sample:-

Take some of water sample using a pipette while taking the water sample. Ensure that no matter are settled down on the container bottom. If the matter settled down on the container's bottom. Stir the water sample, because if the matter is not dispersed equally then reading will not be accurate.

Extract the filtrate:-

Now, pour the water sample into the container through the filter paper. Repeat this process at least 3 times to ensure that the matter is entirely collected in the filter paper and transfer to the evaporating dish.

weigh the evaporating dish with filterate:-

Allow the present matter to dry completely, then weigh evaporating dish with extracted filterate and note the reading in mg and calculate the TDS.

$$\text{TDS} = (A - B) \times 1000 / 50\text{mL}$$

A - Evaporating dish weight with filterate in mg.

B - Empty evaporating dish weigh in mg taken.

$$\text{TDS} = \frac{(50 - 7.5) \times 1000}{50\text{mL}}$$

$$\text{TDS} = \frac{42.5 \times 20}{50}$$

$$\text{TDS} = 42.5 \times 20$$

$$\text{TDS} = 850 \text{ ppm.}$$

→ TDS of the given solution which is taken from the Boowia Village Tapwater is 850 ppm.

→ TDS which is above 400 is not good for drinking. It is poor to drink which is not suitable. So they use the public supplied drinking water.

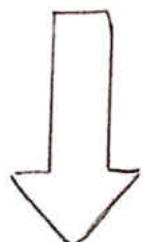

water purification can remove all the unnecessary bacteria and viruses from the water that is hazardous for our health. Water purification may also improve the flavour and appearance of the water. It removes the unpleasant odour.

Freshwater is a finite and limited resource on the Earth and increasingly much of it is polluted by both pathogenic microbes and chemical contaminants.

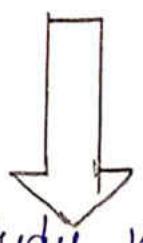

As there is scarcity in drinking water in Barwala village. The main source of drinking water of them is tap water. So we just advised to them that their drinking water should be boiled for better health conditions. We also suggested them to not to store that water for many days to prevent fungal growth. We had a meeting with the volunteer's president to take care of water cleaning. And also we put a step forward to increase their water supply at all time.

We create awareness among the villages about the healthy drinking water and its benefits to them.

Selection of Baruva village in Srikakulam district, Andhra Pradesh as the study area due to its rural and backward status.

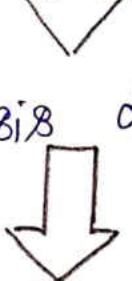

Identification of 50 households for the demographic survey and identification of water resources and mode of drinking water being improved by the people

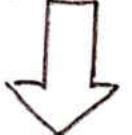

A cross section study was conducted by administering a well structured questionnaire which is comprised of three sections assessing knowledge, awareness and utilization of drinking water.

Proactive awareness programmes on the pH & TDS analysis of water.

Statistical analysis of the collected data.

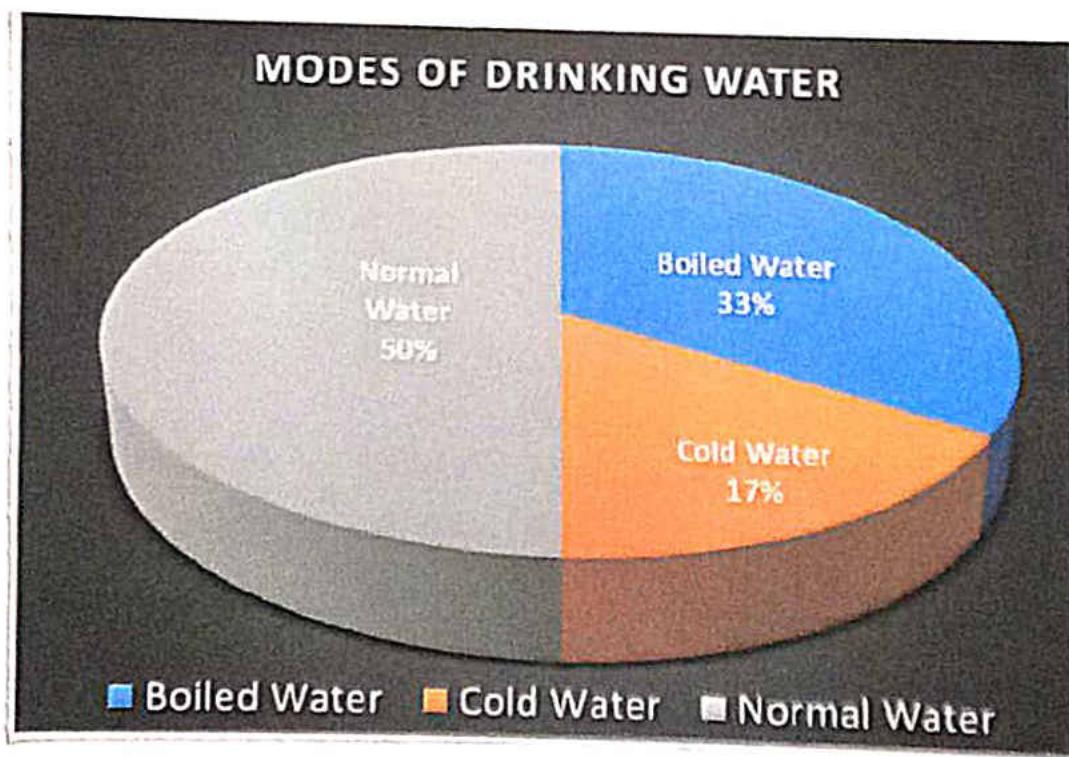

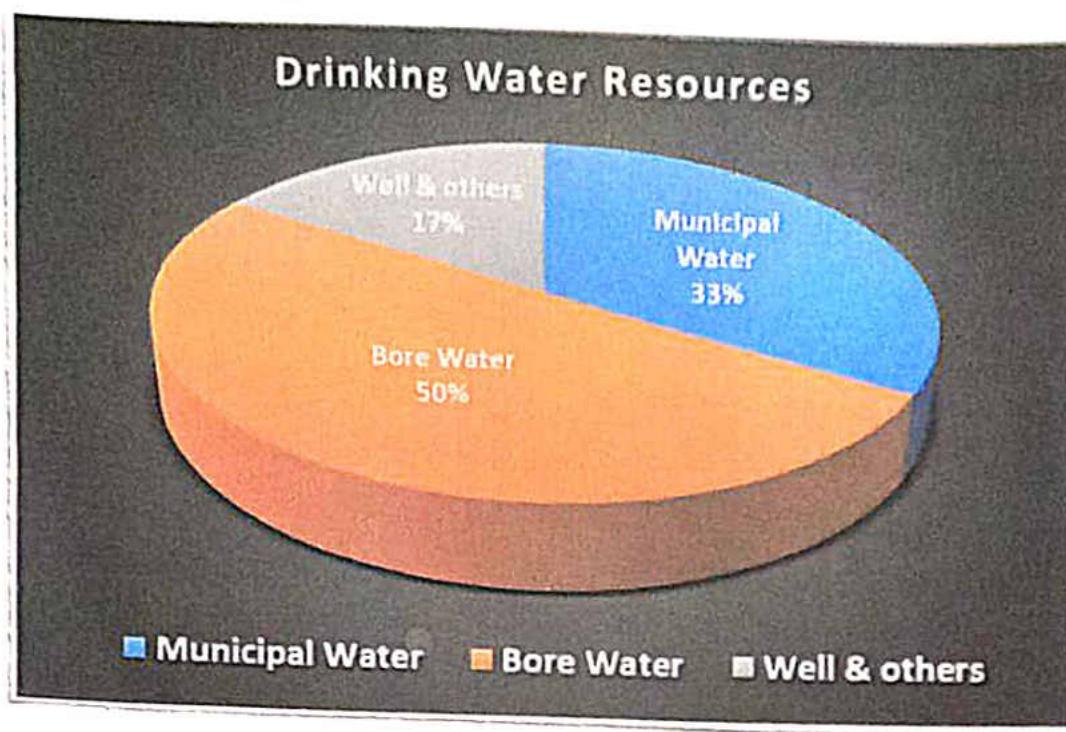

Steps proposed for more effective implementation and utilization of the pure water.

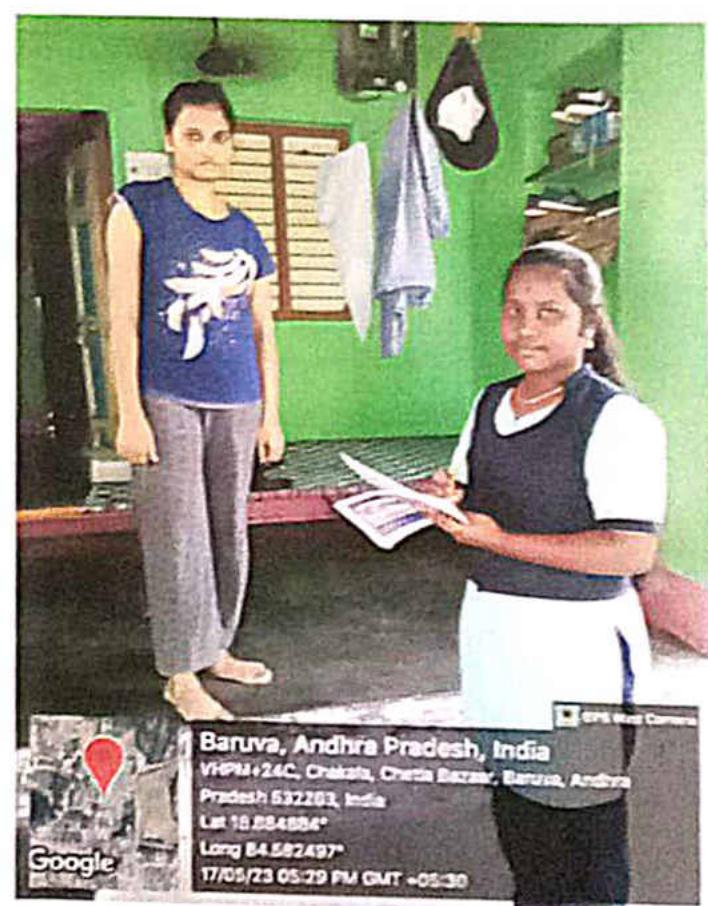

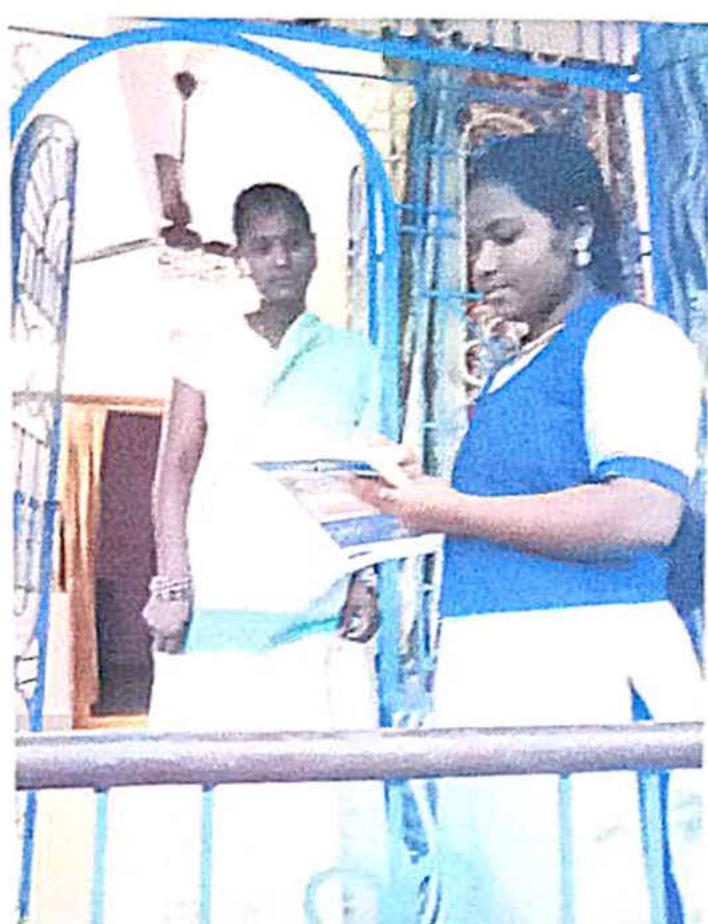

CHAPTER 6: RECOMMENDATIONS AND CONCLUSIONS OF THE MINI PROJECT

Water plays a key role in everyone's life. As a healthy water is needed in everyone's life. They also asked us to provide healthy water resources for them to drink to that we provide short term action plan and long term action plan which includes in the supply of sufficient good water everyday by filtration and providing water facilities. In the long action plan term includes usage of water saving aerators and by promoting Ecofit machines for managing their water quality, And also 'Hello' a device which produce safe water from non-drinkable water resources.

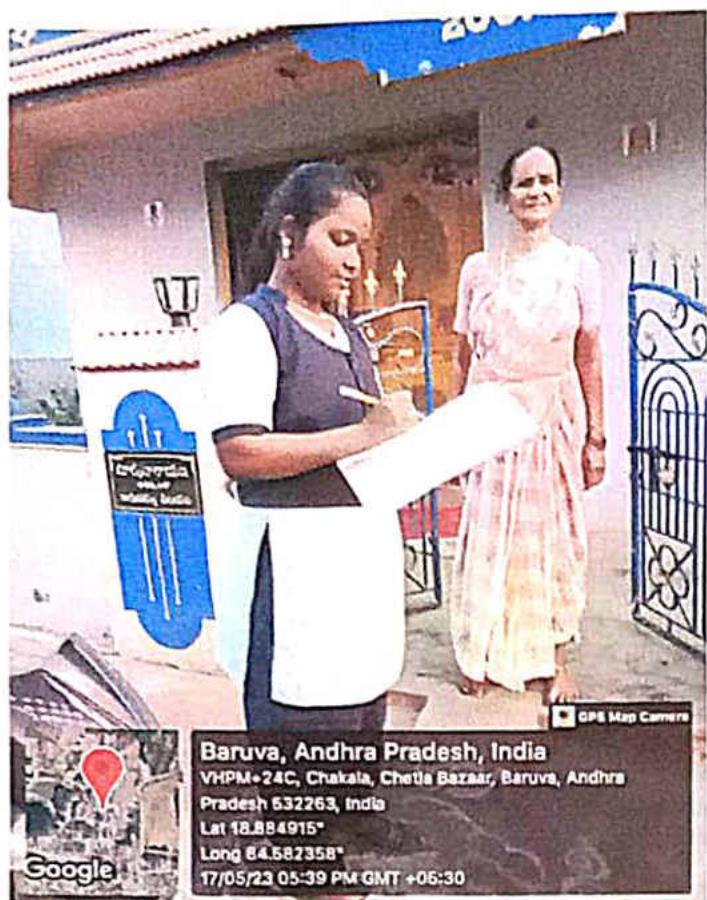

Most of the known and acceptable suggestion is to drink water by boiling.

At last due to this project which had socio-economic survey creates the connecting link between the relations with students and villages. This project creates awareness on the purity of water and different modes of drinking water. And also it provides Natural testing of pH and TDS which shows the relatively acceptable source to drink. It brings awareness about the different water sources in the village and its utility by villages.

Student Self-Evaluation for the Community Service Project

Student Name: Kothapalli. Abisha Priya

Registration No: 2222 0011 23004

Period of CSP: From: 17-5-2023 To: 20-6-23

Date of Evaluation:

Name of the Person in-charge:

Address with mobile number:

Please rate your performance in the following areas:

Rating Scale: 1 is lowest and 5 is highest rank

| | | | | | |
|---------------------------------------|---|---|---|---|---|
| 1) Oral communication | 1 | 2 | 3 | 4 | 5 |
| 2) Written communication | 1 | 2 | 3 | 4 | 5 |
| 3) Proactiveness | 1 | 2 | 3 | 4 | 5 |
| 4) Interaction ability with community | 1 | 2 | 3 | 4 | 5 |
| 5) Positive Attitude | 1 | 2 | 3 | 4 | 5 |
| 6) Self-confidence | 1 | 2 | 3 | 4 | 5 |
| 7) Ability to learn | 1 | 2 | 3 | 4 | 5 |
| 8) Work Plan and organization | 1 | 2 | 3 | 4 | 5 |
| 9) Professionalism | 1 | 2 | 3 | 4 | 5 |
| 10) Creativity | 1 | 2 | 3 | 4 | 5 |
| 11) Quality of work done | 1 | 2 | 3 | 4 | 5 |
| 12) Time Management | 1 | 2 | 3 | 4 | 5 |
| 13) Understanding the Community | 1 | 2 | 3 | 4 | 5 |
| 14) Achievement of Desired Outcomes | 1 | 2 | 3 | 4 | 5 |
| 15) OVERALL PERFORMANCE | 1 | 2 | 3 | 4 | 5 |
